New chances through early diagnosis

As a result of advancements in modern medicine, many diseases are curable today. New and extremely effective drugs, surgery techniques and other therapy methods are constantly being developed, resulting in significant improvements for patients. Particularly in the area of cancer – early detection and diagnosis helps patients in the necessary steps toward recovery. To this end, regular tests to detect the onset of cancer are important in the **early diagnosis** and treatment of this disease.

It is estimated that worldwide more than 12 million people develop cancer every year. Statistically speaking, this means that one-in-three Europeans will develop cancer during the course of their life. In Germany, alone, there are about 440,000 new cases of this lifethreatening disease every year. With the help of medical advancements, approximately **half of all cancer diseases** can be permanently **cured**.

In Germany the death rate from cancer has been declining over the past 15 years. Experts attribute this significant health improvement to early testing and diagnosis, and procedures that inhibit the onset of more common cancer forms.

Regular check-ups, including a colonoscopy for middle-aged adults, helps doctors detect polyps, which might otherwise degenerate and lead to colon cancer.

The most common cancer types in women and men – breast cancer and cancer of the prostate gland – can be treated and fully cured if detected during the early stages. The KLINIK BAD TRISSL, with its 40 years of experience in the treatment of cancer, now offers the **OnkoCHECK** prevention programme.

ONKO CHECK

THE KLINIK BAD TRISSL PROGRAMME

The **OnkoCHECK** offers a patient an individual assessment of personal cancer risk, as well as comprehensive preventative examinations, performed on the highest medical and technological level by our experienced cancer specialists. All examinations are completed by our healthcare professionals with the express interest in cancer prevention and early diagnosis.

The examinations are carried out on two or three consecutive days with one or two overnight stays (Standard, Business or Premium programme) in our clinic. These programmes are arranged on a fixed schedule, so that there are no waiting periods. During all treatments and consultations you are examined and advised by your own personal doctor, who guides you through the programme.

In a comprehensive final consultation we give you the results of the tests which **OnkoCHECK** has determined, based on the latest scientific research, and discuss any measures which you may then need to consider in order to ensure your good health.

For your **overnight** stay you can choose between a modern, comfortably furnished **patient's room** or a luxuriously appointed clinic **suite**, and single or double-rooms are available, so that another person can also accompany you.

Enjoy the **beautiful Alpine countryside of Upper Bavaria** with its mountains and lakes, and a breathtaking view of the Kaiser mountain range. Efficient travel connections – **just an hour's drive from Munich, Salzburg, or Innsbruck** – also makes our oncology center an ideal location, both for recreational outings and cancer prevention.
